Current situation of Danube salmon in Una river and its sensitivity to dam construction

Boris Davidov

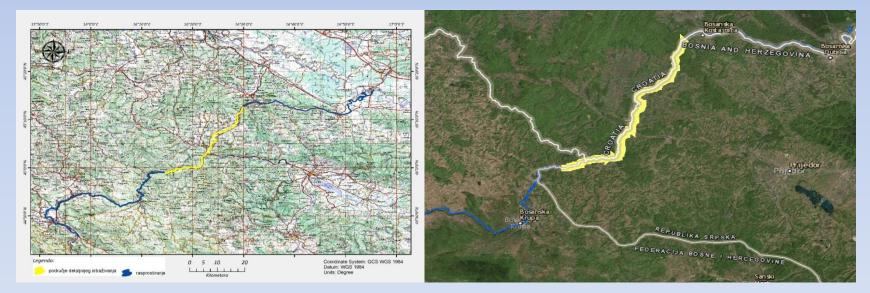

Society for research and protection of biodiversity

### Introduction

## Prime habitat

 From the end of the canyon of river Una close to the Bosanka Krupa located upstream to the city of Kozarska Dubica located downstream.

#### Population trends and characteristics

## Dam threat

- Unique structure of the river.
- Almost all fishes in population spawn inside main river and the spawning grounds will be changed and destroyed.

## Conclusion

- Stop any chance of dam approval by the government and influence more public about the problems that this fish species would face if the river gets dammed.
- Use tourism and economic value of tourist fishing as a part of the rising economy needs.
